

Mohawk Solar

Case No. 17-F-0182

1001.38 Exhibit 38

Water Interconnection

EXHIBIT 38 WATER INTERCONNECTION

The proposed Facility is not expected to require water interconnection facilities. Therefore, the requirements of 1001.38 and this Exhibit are not applicable to the operation of the PV solar panels, and are not addressed in this Application. If a new operation and maintenance (O&M) building is constructed to support the Facility, it is anticipated that water supply needs will be satisfied using water carried on-site. If an existing building is used for O&M purposes, the Applicant will evaluate the adequacy of any existing water supply and drill a new water well, if necessary.
